

Internet of Things

Introduction to IoT

Eng. Abdallah El Ghamry

IoT Applications: Smart Umbrella

- An umbrella that **provides information about the likelihood of rain** so that users can make a **simple decision** about whether to **take the umbrella with them** as they leave their home.

IoT Applications: Smart Umbrella

- The umbrella has a handle that would illuminate when snow or rain was in the forecast.

IoT Applications: Smart Umbrella

- Using existing **Wi-Fi** technology to pull information about the weather from the Internet.

IoT Applications: Quirky Egg Minder

- When your egg supply gets low, this IoT application will **send info directly to your phone** to remind you to **buy more eggs**.

IoT Applications: WELT

- WELT cares **user's overall health** by measuring **waist size**, **steps**, **sitting time** and **overeating habits** with the sensing technology.

IoT Applications: Yucky Diaper Sensor

- New startup [24eight](#) has created “**wireless diapers**” that contain a **cellular chip that sends a text message** to the lucky mom or dad tasked with cleaning up the mess.

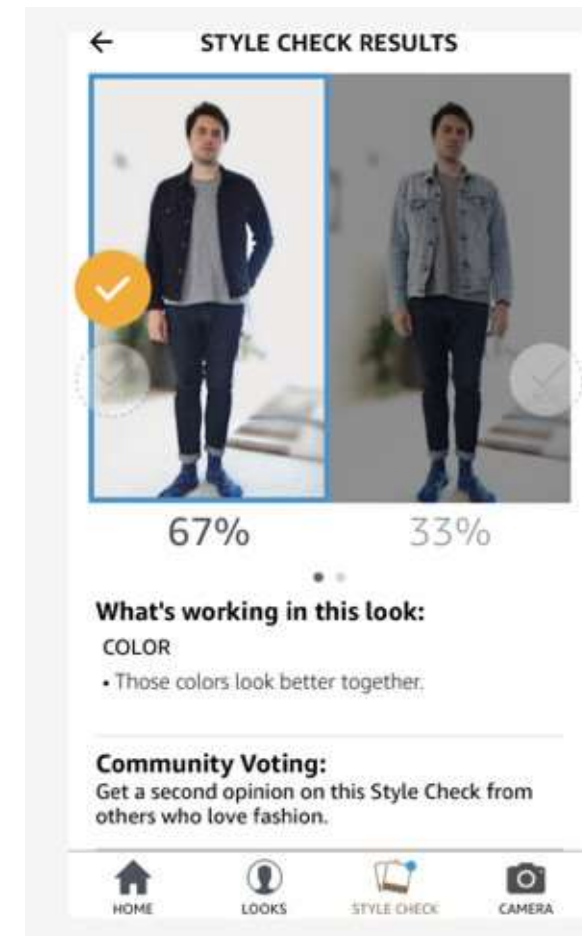

IoT Applications: Smart Toaster

- You can use your **smart phone** to set the darkness of your toast, and if a friend has the same toaster you can send them a picture on toast.

IoT Applications: Amazon Echo Look

- Amazon's **Echo Look** will **judge how you look**.
- It **compares two outfits** and rate **which one is better**.

IoT Applications: HapiFork

- The HapiFork is a Bluetooth-enabled “smart fork” that vibrates when it senses you’re eating too fast.

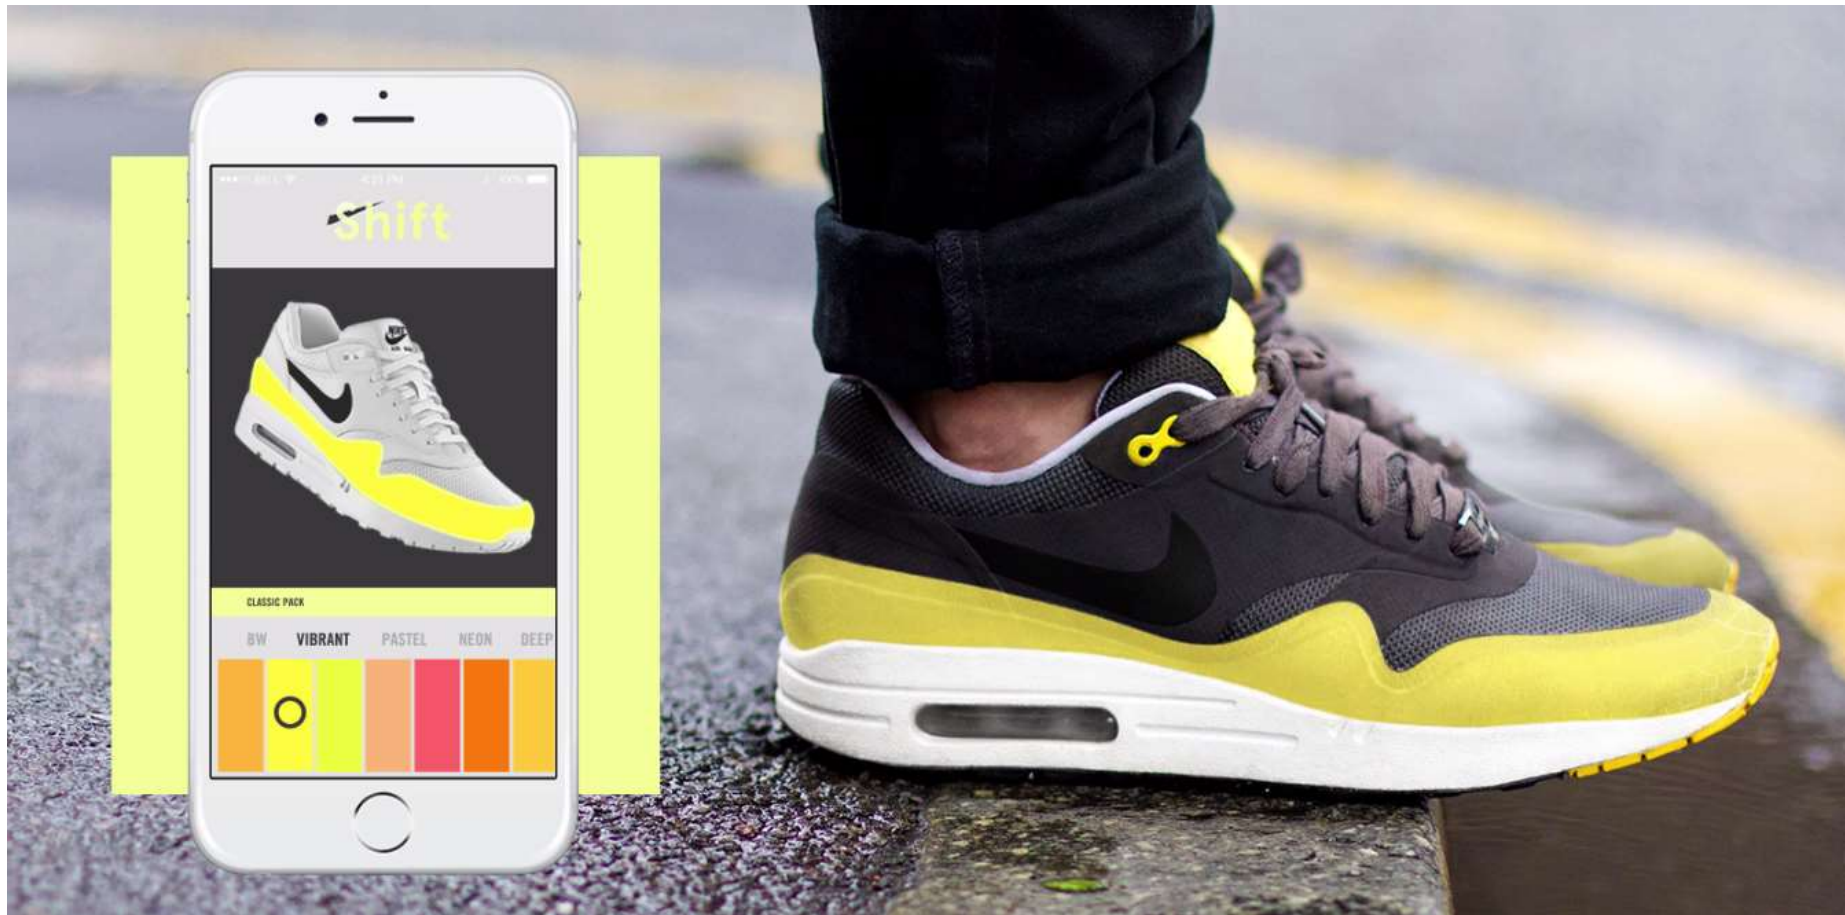

IoT Applications: Smart Refrigerators

- A refrigerator with a **Wi-Fi enabled touch screen** that lets you manage your groceries.

IoT Applications: Smart Shoes

- Smart shoes allow users to change the color of the shoe with **one tap on their smartphone**.

IoT Applications: Healthcare

Network

Internet

Things

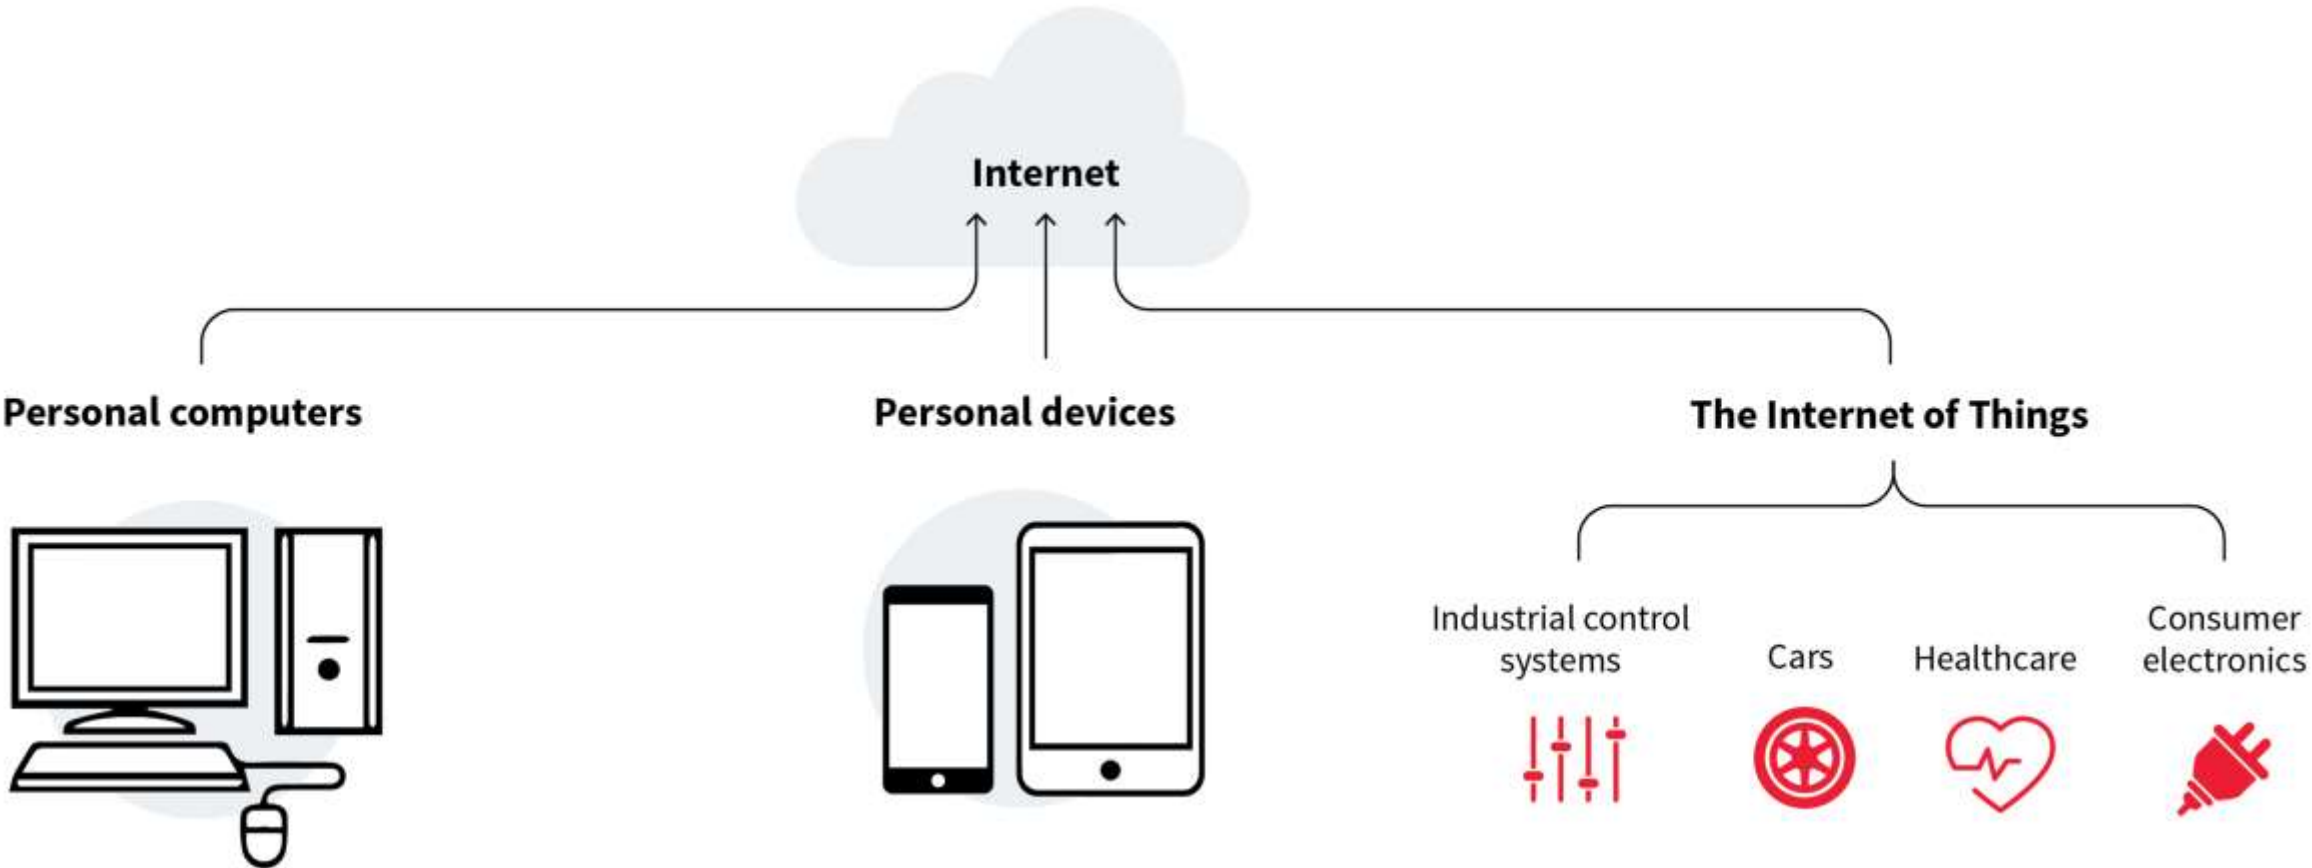

- “Things” are a **generic set of entities**, including **smart devices**, **sensors**, **human beings**, and any other **object** that is aware of its context and is **able to communicate with other entities**, making it **accessible at anytime, anywhere**.

Things

Internet of Things

Things

- The Internet of Things (IoT) represents the **network of physical objects** “**Things**” that are integrated with sensors, software and other technologies for the purpose of exchanging data with other devices on **the Internet**.

AIoT Home

AIoT Home

- 01 Main Processor
- 02 Connection Select Switch
- 03 Sensor Block
- 04 LED Block
- 05 GAS Sensor
- 06 GAS Break(Servo Motor)
- 07 Buzzer
- 08 CdS Sensor
- 09 Text LCD
- 10 Camera
- 11 Touch Keypad(3 x 4 key)
- 12 RGB LED
- 13 TFT LCD
- 14 Audio Block
(Sound/Speaker/Mic/Level Bar)
- 15 Temperature/Humidity Sensor
- 16 Door Lock(Servo Motor)
- 17 FAN
- 18 Dust Sensor

Sensors

- A **sensor** is a device that detects some type of input from the **physical environment**.
- The input can be **light, heat, motion, pressure** or any number of other environmental phenomena.

Sensors: Temperature/Humidity Sensor (DHT11)

- The **DHT11** sensor measures temperature and humidity.

Sensors: Temperature/Humidity Sensor (DHT11)

Sensors: Temperature/Humidity Sensor (DHT11)

Sensors: Temperature/Humidity Sensor (DHT11)

Sensors: Temperature/Humidity Sensor (DHT22)

- The **DHT22** sensor has better specifications than DHT11.

Sensors: PIR Motion Detection Sensor

- The **PIR** (Passive Infrared) sensor allows you to **sense motion**.
- PIR is used to **detect whether a human has moved** in or out of the sensor's range.

Sensors: PIR Motion Detection Sensor

Sensors: PIR Motion Detection Sensor

Sensors: Microphone Sound Detection Sensor

- The **microphone sound sensor**, as the name says, **detects sound**.
- It gives a measurement of **how loud a sound is**.

Sensors: Microphone Sound Detection Sensor

Sensors: Microphone Sound Detection Sensor

Sensors: Gas Sensor (MQ-2)

- The **MQ-2** gas sensor module is useful for gas leakage detecting.
- The module measures gas such as **butane**.

Sensors: Gas Sensor (MQ-2)

Sensors: Gas Sensor (MQ-2)

Clean Air

Output Voltage

Sensors: Gas Sensor (MQ-2)

Sensors: CdS Sensor

- A **CdS photocell** or Light Dependent Resistor (LDR) is a resistor where the **resistance changes based on the amount of light**.

Sensors: CdS Sensor

Sensors: CdS Sensor

Sensors: Dust Sensor

- The **dust sensor** is a simple air monitoring module.

Sensors: Dust Sensor

Sensors: Ultrasonic Sensor (HC-SR04)

- As the name indicates, **ultrasonic sensors** measure **distance** by using **ultrasonic waves**.

Sensors: Ultrasonic Sensor (HC-SR04)

RECEIVER

TRANSMITTER

OBJECT

Sensors: Ultrasonic Sensor (HC-SR04)

Sensors: ECG AD8232 Heart Rate Sensor

- The heart rate module with the [AD8232](#) is a device which is capable of **measuring electrical activity of the heart**.
- The activity can be displayed using an **ECG** type graphic.

Sensors: ECG AD8232 Heart Rate Sensor

Sensors: ECG AD8232 Heart Rate Sensor

Actuators

- Sensors turn a **physical input** into an electrical output, while **actuators do the opposite**.
- Actuators take electrical signals from control modules and **turn them into physical outputs**.

LEDs

Buzzer

DC Fan

Servo Motor

AIoT Home

AIoT Home: Simple Experiment

- Turn on the **light** and **fan** when **human being detected**.

PIR Sensor

LEDs

DC Fan

AIoT Home: Simple Experiment

```
from pop import Pir, Fan, Led
import time

pir = Pir(22)           # Create Pir object and connect to GPIO 22
leds = Led(23)         # Create Led object and connect in GPIO 23
leds2 = Led(24)        # Create Led object and connect in GPIO 24
dcfan = Fan(17)        # Create DC fan object and connect in GPIO 17

while True:
    ret = pir.read()   # Return value read from the PIR sensor
    if (ret == True): # If a human is detected
        leds.on()      # Turn on led
        leds2.on()     # Turn on led2
        dcfan.on()     # Turn on fan
        time.sleep(2)  # Wait 2 seconds
    else:              # Else
        leds.off()     # Turn off led
        leds2.off()    # Turn off led2
        dcfan.off()    # Turn off fan
        time.sleep(0.1) # Wait 0.1 seconds
```
